Teamwork and *Coopertition*

A teamwork environment fosters an atmosphere that encourages friendship and loyalty. These close-knit relationships motivate and align employees in parallel to work harder, cooperate, and support each other. Individuals have various talents, weaknesses, communication abilities, strengths, and habits, and together, when the skills are combined it leads to amazing collaborative ideas. Our team reflects this in all its power, sharing ideas, helping each other, and never backing down from a challenge. Plus, although an original idea may not be right, a discussion around it will often trigger new creative thoughts and lead to future bright ideas. This is the whole ideology our team revolves around.

Especially in a time when we are so far apart, our team meetings gave us something to look forward to each day.We finally felt empowered - doing something about the problems in the world around us, rather than just being idle spectators about it.

Expert Advice

Since our idea was medical in nature, we decided to take the advice of doctors and essential supplies workers. We interview three experts:

- ***Dr. Panna Prayaga, ENT Specialist*** - told us the case of a patient who had contracted the virus through parcel delivery - giving us the idea for the supplies box
- ***Dr. Manisha Pal, head of pharmacy departmen***t - told us that hospital guidelines to constantly wipe and disinfect the table were too tedious, and often not followed. This gave us the idea to automate the table disinfection process.
- ***Our local hospital*** witnessed two positive cases, even though cash transactions were banned and precautions were taken. We realised that this was most likely the fault of the credit card number pad.

Community outreach

We spread word of our idea amongst our community - whether it be through online chatrooms through like-minded people, or calling up our elderly grandparents - we were excited about getting the word out. We encouraged everyone to take up basic protective measures, and talked about basic guidelines to take while in an essential supplies delivery setting.
